Description

Reflection

Artifact 14

- Sprint 4 (Oct 3rd 2022 - Oct 10th 2022)
- Scrum Master: Philip Marshall
- Members: Tim, James, Zak, and Philip

- We did well:
 - Philip
 - We did well on focusing on the priority cards and moving forward in our progress for the sprint.
 - Tim
 - We went on a call on teams to help each other catch up and understand the code base. We managed to communicate a good amount and answering questions.
 - Zak
 - Zak was able to figure out backend testing. He has a pretty grasp on doing DDD. We will all try to get together to do testing more often. Also he set up code coverage.
- Needs improvement:
 - Philip
 - We can improve on making tests before we write code. Since we are going by test driven development, we should make sure to write tests for everything we write.
 - Solution: Now that we have testing set up, we can now focus on catching up on tests as well as going from this point forward with writing tests before code.
 - Tim
 - When we have problems, we take a while to tell the team about the them.
 - Solution: We could talk about the issue quicker. We could do sudo stand ups to present problems and blockers faster. Also more peer programming and getting on calls with team members.
 - Zak
 - Absent team members made it hard to get to together and get work done and answer questions.
 - Solution: Making sure we are available for calls. We can update everyone when we make progress or solve problems.
- Finished 12 out of 15 cards

- General Notes: We all think it was overall a successful sprint with a lot of progress. We know where to go from here and we are all at a point to begin next sprint.
- Next Scrum Master: Zak
